

CW SERIES DOORS

CONTINUOUSLY WELDED (1 3/4" THICK)

D - 6

CW SERIES DOOR STANDARDS

DISCLAIMER

Please be informed that it is normal and typical to see visible weld marks on the door face sheets of CW series doors. This is a result of a manufacturing process that utilizes automated and semi-automated projection or spot welding. This process creates a small cup-shaped surface indentation and discoloration in the immediate weld area. The use of high-gloss, dark pigment or translucent paints will further exaggerate the weld marks. Spot and projection welding are inherently more effective methods of joining metals and are evidence of a superior product. This is the case for all CW series doors.
